Futures and forex trading contains substantial risk and is not for every investor. An investor could potentially lose all or more than the initial investment. Risk capital is money that can be lost without jeopardizing ones' financial security or life style. Only risk capital should be used for trading and only those with sufficient risk capital should consider trading. Past performance is not necessarily indicative of future results. Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown; in fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk of actual trading. for example, the ability to stand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all which can adversely affect trading results.

Monday July 3rd 2023

Friday July 21st 2023

Today was a SS day. As expected, markets would try to make it back to their BDL. All except NQ made it. Then the decline started.

Monday will be a Buy day. There is little room for the decline to continue, however the rally could start at any time.

Tomorrow will be a Buy day. Tomorrow will be a complicated day. They may try to get back to their BDL to negate the failure, or the decline could start at any time.

Thursday August 31st 2023

Today was a Sell day. It was a confused day, with markets going up and down all day.

Tomorrow will be a SS day. We probably should be looking for some sort of rally, until YM gets back above its BDL. Then anything goes.

Friday September 1st 2023

Today was a SS day. Markets did continue their rally and surpassed all TTT levels. Then the decline started.

Monday will be a Buy day. Markets are close to their target, however since it will be a short trading day, we could be in for a confused day.

Tuesday September 19th 2023

Today was a SS day. All markets made it above their BDL even for the day session. Then the decline started only to be followed by a rally.

Tomorrow will be a Buy day. There is room for the rally to continue but we may be in for some confusion.

Thursday October 12th 2023

Today was a Sell day. As expected markets were confused as they rallied then retested their BDL, then tried to rally again.

Tomorrow will be a SS day. Markets should rally for some to get back to their BDL, then anything goes.
